DOMAIN KNOWLEDGE

Lending Products (Securities based Lending, Tailored Lending, Home Loans) | Mortgages
Accounting & Funding principles | Cost of funds (Funds Transfer Pricing)
Commodities (Gas, Power, Oil, Carbon, Derivatives – Futures, Forwards, Swaps, Options) | Trade Lifecycle

EXPERIENCE

Senior Product Owner | MORGAN STANLEY, New York, US

August 2018 – Present

Product Owner cum Product Manager in Wealth Management Lending department, owning products from end to end: Developing a vision and roadmaps for backlog and product; Developing and maintaining close relationships with business stakeholders to ensure requirements/user stories are translated into the right digital technology products to meet key business objectives; Engaging with and facilitating communication between cross-functional teams and remote members to drive the best-in-class user experience and engagement.

Major Product: Implemented Funds Transfer Pricing (FTP aka Cost of Funds) for international currencies and lending products across the globe (Americas, EU, Asia) and Delivered end-to-end FTP business system.

- * On time delivery overcoming resource constraints and liaising with multiple stakeholders
- * Leveraged stakeholder relationships to marshal project goodwill which eased collection and definition of requirements, served as a scope creep deterrent and ensured smooth software delivery
- * Clear and concise documentation of project scope, requirements and detailed process/program workflow diagrams, successfully utilized documents as a reference to identify scope creep and reflowed tasks
- * Analyzed and processed loan data worth \$300bn across 4 line of businesses in 16 different currencies, generating a daily FTP Charge of ~\$2bn posted to the firm General Ledger
- * Instilled Agile work environment within the team by making sure Dev and QA teams adhered to the documented requirements and committed timelines
- * Defied learning curve for Funds Transfer Pricing quickly becoming Subject Matter Expert
- * Maximized minimal team resources by streamlining handovers between BA, Dev and QA teams during the IT Project Lifecycle and conducting user acceptance testing

Senior Business Analyst | SAPIENT CORPORATION, New York, US

November 2014 – August 2018

ADITI AGARWAL

aditi.a2588@gmail.com; Ph: +1 (201) 904-6024

Product Owner and Senior Business Analyst for North American Wealth Management client, becoming Subject Matter Expert in mortgages accounting and reconciliation reports. Drove that understanding across engineering, product management, and our client-facing functions, critically contributing to product strategy. Increased the value proposition for current and future mortgage products in a high-volume environment, applying deep technical experience and understanding of the mortgage industry.

Major Product: Successfully contributed to the delivery of a new mortgage business system, allowing more accurate calculations of loan amortization and improved compliance. Performed data mapping of over 800 fields between 4 interconnected systems based on each systems functionality provided.

- * Worked hands-on with Finance Accounting team to automate their mortgage accounting and reconciliation of books, refocusing from base loan amounts to actual loan value and reformulating long-term interest to create a more accurate accounting of loan accruals
- * Automated loan accounting principles for different balance types, on different mortgage product types – Fixed term, Adjustable Rate Mortgages (ARM), Held for Investment (HFI), Held for Sale (HFS)
- * Collaborated with Mortgages Operations user group to improve efficiency of functionality by discontinuing fixed-time bulk wires and implementing real-time wires
- * Articulated high-level business requirements into detailed low-level functional specification documents and business stories serving as product roadmap for development and testing teams
- * Developed quality benchmark artifacts and KPIs (key performance indicators) emphasizing clarity of proposed solution and used to discuss requirements with business users
- * Created document templates for Functional Design and Business Requirements Documents for the project

ETRM Developer | SAPIENT CONSULTING, London/Gurgaon, UK/India

July 2010 – November 2014

Systems analyst and senior developer onsite for major ETRM clients across Europe and UK.

- * Performed trade data analysis of over 500,000 derivative trades from a period of 7 years for a migration project and filtered out 80% of trade data from the scope of migration
- * Created functional design document for data migration of the derivatives from existing system to the new ETRM system Openlink Endur and performed automated reconciliation between systems post migration
- * Built data migration and reconciliation scripts for a successful data migration during project cutover
- * Refined EOD processes for generating 'Profit and Loss' and 'Open Exposure' reports via Openlink Endur and increased performance by reducing execution time to 30 minutes from 3 hours
- * Worked with Front, Middle and Back Office users for requirements and functional solution
- * Built MQ interfaces for feeding real time trades from APX, Trayport platforms into Openlink Endur
- * Built excel reports for Profit and Loss and open exposure using Java-based JVS and C-based AVS programming languages
- * Worked on BAU enhancements on production for bi-monthly releases

EDUCATION & CERTIFICATIONS
