As a Technology Consulting professional with 13 years of experience, I bring a proven record of delivering transformative customer journeys to organizations with a focus on process-led executions and data-driven decisions.

Career Summary

- As an IT consultant I worked from strategy to execution across industries, interacting with executive stakeholders and cross-functional teams.
- Having expertise in enterprise solution advisory, IT strategic roadmap design, technology infrastructure assessments, maturity assessments, process transformation, and consulting-led program management.
- Experience working on business model transformation, budgeting and forecasting, cost-benefit analysis, advanced analytics, and value-driven propositions.
- Excellent communication and conflict resolution skills, with a history of driving positive outcomes and sustainable results.

Professional Experience

Principal Consultant – Practice Head ([Infosys Ltd.](#)) – BFSI Consulting

2022 – Current

- Leading the Transformation Realization Office (TRO) consulting practice across people, processes, and programs to build the knowledge repository, implementation artifacts, process building blocks, and accelerators, allowing the reuse of the artifacts in similar engagements to reduce the implementation time by 10%-15%.
- Led the \$16M legacy modernization of Loan Management Solution (LMS) engagement as a technical consultant for one of the large private sector banks in India by enabling strategic governance and adopting the structured methodologies that helped to reduce the delivery escalations and improve overall CSAT.
- Drafted ‘thinning the core’ enterprise-wide approach for private sector banks, consolidating 40+ IT systems to independent enterprise solutions as microservices and API-driven offerings by understanding the overall system linkages and data structures.
- Drafted guiding principles for the cloud operating model across platform engineering, operations, security, data migration, and implementation activities, supporting a multicounty cloud acceleration program for one of the largest corporate banks in the African continent.
- Exhibited Go-to-market approach for Operational process efficiency and resilience offerings by using Risk Management Framework across multiple NBFCs in India, enabling to increase the sales leads by 20%.
- Drafted a high-level design for a conversational AI-enabled chatbot for internal employees, which will help to have a personalized digital assistant for new joiners enabling them to access a large Finacle and BFSI domain knowledge content effectively.
- Led steering committee reviews by presenting the overall Finacle portfolio updates to bank higher management, executive directors, and CXO level stakeholders.

Senior Consultant ([EY LLP](#)) – Strategy Consulting

2018 – 21

- Led strategic implementation for a national-level logistic portal, involving interaction with over 30+ stakeholders from trade associations and government agencies to understand the business requirements and to design a single-window trade platform.
- Designed Enterprise Architecture for public road transport operators across scope, technology model, and business model as per Zachman Framework, facilitating informed decisions by administrative authorities.
- Prepared and executed strategic IT roadmap from the design to development of the Passenger Mobile Application, by interacting with daily commuters, system integrators, OEMs, and bus operator management, which enabled to launch of the passenger information solutions with improved travel experience that helped to win ‘EY exceptional’ entrepreneur category award.
- Worked along with Microsoft cloud service providers for disaster recovery planning and communication plan drafting for the client, which eased the setup of the DR environment and business continuity planning during COVID-19.

Sulekh Suresh Yashwantrao

ysulekh15@gmail.com | 9819926654 | [LinkedIn](#)

- Headed the ERP Advisory unit for designing the 'Intelligent Transport Management System' for Public Transport Operator in Mumbai, which helped to digitize the internal processes, improve the operating model, and enhance the flow of information within the organization.
- Analysed the large data set for network availability issues (dark patches) from IoT-based tracking devices, by data generated from telecom towers to prioritize the locations for resolution of network issues, which eased a reduction in total network availability by 20%.
- Formulated strategy for testing of application software components and network services for multiple end-users across various locations, which helped the system integrator to track defects and deliver required functionalities as per defined specifications.
- Designed technology solution for multivendor development of e-governance requirements along with defining roles and responsibilities of each stakeholder, which helped to publish the RFP with comprehensive requirements.
- Program managed the private and secured MPLS network infrastructure for 27+ locations within the city, which eased the transition of the complete network from multivendor network lines to centrally managed network infrastructure.

Assistant Consultant ([Tata Consultancy Services](#)) – SAP Infrastructure Consulting

2011 –17

- Developed and delivered SAP Operational Control Centre (OCC) product of intellectual dashboards with well-defined Key Performance Indicators (KPIs), that enabled the TCS unit to get quality gate certification from SAP AG.
- Formulated a strategy to manage multiple change request movements to different SAP systems, leading to a reduction in required person-months by 30%.
- Automated the business process checking and database sanity check processes, thus reducing repetitive efforts involved by associates.
- Designed and developed a dashboard application for higher management to access approval processes online on a real-time basis, reducing the total turnaround time by 20%.
- Analysed and recommended user licensing reduction for rarely used SAP instances to cut down the recurring cost, achieving extra licensing cost reduction.
- Led a team of four associates for system planning and configuration activities and achieved customer satisfaction of more than 98%, thereby receiving a promotion in the accelerated time.
- Defined and configured new Standardized Operating Procedures (SOPs) with systematic process controls, thus reducing change sequencing errors by 70%.
