Profile Summary

- Experienced Software Tester with 1.8 years of expertise in manual and automation testing
- Specialization in API testing, Performance testing and Agile methodologies
- Proficient in Selenium Web-driver, Postman, Bugzilla, and Apache JMeter for ensuring seamless test execution and defect tracking
- Improved API response times by 20% through performance testing and optimized server resource utilization
- Designed and executed 200+ test-cases achieving 98% test coverage for critical applications
- Automated 60% of test cases using Java, reducing regression testing time by 40%
- Developed and implemented effective test strategies that enhanced defect detection by 30%, reducing post-release issues
- Elevated overall software quality by optimizing testing processes and ensuring comprehensive coverage
- Provided daily and weekly test reports, tracking testing progress and defect trends
- Active contributor to Agile processes, participating in sprint planning, daily stand-ups, and retrospectives

Technical Skills

Testing Tools & Automation: Selenium Web-driver (Java)

API & Performance Testing: Postman, Apache J Meter, Swagger

Defect Tracking & Test Management: Jira, Bugzilla, Requirements Traceability Matrix (RTM)

Testing Methodologies: Manual Testing, Functional Testing, Regression Testing, System Testing

Development & Database: Java, SQL, Agile (Scrum)

Education

Bachelor of Computer Applications (BCA)

Thiruvalluvar University, Periyar Govt Arts College, Cuddalore (2019 – 2022)

Professional Experience

HEPL - A CavinKare Group of Company

Software Tester | Dec 2023 – Present

Key Projects:

1. **Fintech (Banking Mobile & Web Application):** A comprehensive financial platform offering seamless solutions for checking accounts, loans, credit cards, and business banking services.

Responsibilities & Achievements:

- Conducted functional, regression, and performance testing to validate system reliability and stability.
 - Developed and automated critical test scenarios using Selenium & Java, reducing manual efforts by 50%
 - Utilized Postman to verify API transactions, ensuring data security and integrity.
 - Identified and resolved 20+ critical defects, improving system reliability.
2. **NERAM (Time Management Tool - Mobile & Web):** An automated employee work hour tracking system which saves manual timesheet reconciliation efforts by 20 hours a week and decreases payroll processing errors by 15%

Responsibilities & Achievements:

- Automated 80% of regression test cases, reducing test execution time from 5 days to 2 days.
- Executed integration testing to validate seamless interoperability with external systems.
- Identified, documented, and prioritized 50+ software defects using Bugzilla, collaborating with developers to resolve 95% of reported issues, resulting in streamlined application stability, according to user feedback

Certifications & Learning

- Completed Automation Testing Training (Selenium, Java)
- ISTQB Foundation Level Certification (In Progress)
- Successfully completed Agile Scrum Master Course from SkillUP
- Actively participating in QA communities and technical workshops
