Profile Summary

Experienced QA Engineer with 3.5 years of hands-on experience in manual and automation testing of SaaS and cloud-based applications. Proficient in testing web UIs, APIs, data workflows, and distributed systems across cloud platforms. Strong understanding of Agile processes, CI/CD practices, and end-to-end test lifecycle management. Proven ability to ensure product quality while supporting test automation and mentoring junior team members.

Technical & Core Skills

- Automation Tools:** Selenium WebDriver, Cucumber (BDD), Gherkin, Allure
- Languages/Scripting:** Python, Java(basic)
- API Testing:** Postman, Swagger, REST API, JSON
- Testing Strategies:** White Box, Black Box, Grey Box
- Testing Types:** Manual, Functional, Regression, Integration, UAT, Performance, Automation
- CI/CD & DevOps:** GitHub Actions, Git, Docker
- Defect Tracking:** Azure DevOps, JIRA
- Database:** PostgreSQL
- Cloud Platforms:** AWS, GCP, Azure
- OS:** Windows, Linux (Ubuntu)
- QA Methodologies:** Agile, Scrum, SDLC, STLC
- IDEs & Tools:** PyCharm, VS Code, Jupyter Notebook
- Monitoring:** Grafana, History Server
- Big Data / Data Engineering:** PySpark, Databricks, Unity Catalog
- Messaging Systems:** RabbitMQ

Professional Experience

Modak Analytics

Role: Software QA Engineer

May 2022 - Present

- Developed automation test suites using **Selenium WebDriver** with **Python**, reducing manual regression effort by **40%** and increasing test coverage across critical web modules.
- Conducted **comprehensive functional, regression, UAT, integration, and UI testing** on SaaS-based platforms, identifying and reporting over 50 critical defects.
- Validated **REST API** responses and database records by correlating data across **PostgreSQL** to ensure back-end integrity and accurate UI reflection.
- Led advanced API testing initiatives with **Postman** and **Swagger**, validating over **100 RESTful endpoints** (authentication, payloads, status codes), cutting API defects by **25%**.
- Created and maintained **test plans, test cases, and BDD-style test scripts** using **Gherkin**, improving test coverage transparency across teams.
- Actively participated in **Agile Scrum ceremonies**, working closely with developers, BAs, and DevOps during planning, reviews, and retrospectives.
- Conducted regression and sanity testing on services deployed on **AWS** (EC2, S3) to ensure post-deployment reliability in production-like environments.
- Monitored **CI/CD pipelines via GitHub Actions**, collaborated with DevOps for early defect detection and seamless deployment support.

- Mentored 3 junior testers in writing scalable automation scripts, proper **defect logging in JIRA**, and applying **BDD best practices**.

Modak Analytics

February 2022 - May 2022

Role: Software Intern

- Assisted senior QA team in executing functional and backend test scenarios for product implementation.
- Performed basic API validation using Postman, checking endpoint responses, request headers, and payload formats against defined specifications.
- Conducted functional testing, regression testing, and UI testing of internal web applications and data dashboards, ensuring consistency and usability.

Projects

Yeedu – SaaS Product | Cost Optimized Apache Spark Infrastructure

Role: QA Engineer | Tools: Selenium, Python, BDD, Postman, GitHub Actions, Databricks, Monitoring

Description: Yeedu is a Spark-based cloud optimization platform that enables users to configure and manage clusters, Spark jobs, notebooks, and workflows to improve data performance and optimize resource costs.

- Designed and implemented end-to-end test plans for UI, functional, regression, integration, and workflow-based testing.
- Developed a BDD-based automation framework using **Selenium, Python, Cucumber**, and **Gherkin** to test dynamic UI components and user interactions.
- Automated workflow testing for job execution and resource provisioning using **REST APIs** and **CLI** triggers.
- Utilized **Jupyter Notebooks** for interactive validation of output data, exploratory PySpark testing, and test dataset analysis.
- Tested data governance and access controls on **Databricks** using **Unity Catalog** to ensure secure role-based access.
- Monitored **cluster logs via Grafana** and analyzed **Spark job execution logs via History Server** to verify backend processing and diagnose test failures.
- Validated message-driven asynchronous processes using **RabbitMQ**, ensuring consistent behavior under distributed execution scenarios.

Certifications

- ISTQB Certified Tester – Foundation Level
- Microsoft Certified: Introduction to Programming Using Python
- NPTEL Certification: Programming in Java
- Microsoft Certified: Azure Fundamentals

Education

R.V.R&J.C College of Engineering

B.Tech in Computer Science and Engineering, Guntur, Andhra Pradesh | 2018-2022 | 9.0 CGPA
