SR. BUSINESS ANALYST/PRODUCT OWNER

Over ten years of experience as a Sr. Business/Systems Analyst and IT Professional working for multiple Fortune 100 companies across multiple domains, including Finance, Software Development, Commercial/Retail Banking and Lending, Credit Risk, Regulatory, Government, Manufacturing and Supply Chain/Logistics. Successfully supported/completed large corporate projects that were delivered on-time and consistently under budget. Created, negotiated and drafted Statements of Work (SOWs) and Requests for Proposals (RFPs) for multiple clients working directly with Management and 3rd parties.

My passion for information technology has no bounds, and I am a lifetime learner dedicating myself to staying on top of emerging technologies and processes/methodologies. Comfortable taking on a leadership and mentor-ship role in all my roles and welcome wearing many 'hats' during my project endeavors.

SKILLS

- Authored artifacts including vision/scope, functional and non-functional requirements documents, current-state/future-state (fit-gap) analysis, process/quality improvement (ISO 9002/Six Sigma), technical specifications (TDDs), wire-framing/prototyping, traceability, user stories and UML standards.
- Eight years of Data Analysis experience utilizing advanced Excel (pivot tables, Power Pivot and macros), Power BI, Power Query (DAX), MS SQL, SSIS, SSRS, Tableau, Crystal Reports, MS Access, most recently at Anthem worked with multiple data sources and ETL of many feeds into a data warehouse for reporting and workflow activities (MS SQL Server & Oracle).
- Expertise reviewing and creating test plans/scenarios, test cases and executing user acceptance testing (working with front line users and 3rd party vendors).
- Extensive Agile and Scrum Master experience (7+ years), including prioritizing product/sprint backlogs, facilitating daily stand-ups, retrospectives and assisting with release demos and release notes.
- Experience working with business, QA and development with capturing/prioritizing and resolving defects using systems such as JIRA, Confluence, Qtest, Azure DevOps, HP Quality Center and Rally,
- Expert Level Experience with: ERP Systems (Oracle Cloud Fusion, SAP, Peoplesoft), Loan Originations Systems (LOS), Agile Tools (JIRA, Rally, Azure Dev-Ops), UI/UX tools (Balsamiq, Axure) and low-code platforms such as:
 - *Outsystems, Xojo, Oracle Application Express (APEX) - over 10 years*
- Strong technical writing and communication skills for requirements, systems/technical design, modeling and creating user training/help documentation.
- UX and Design experience utilizing many wire-framing/prototyping tools (Axure, OmniGraffle, Balsamiq, XCode, InVision, MS SketchFlow and Visio) and utilizing best practices.
- Experience with CRM applications (Salesforce) and writing requirements and wire-frames for enhancements.
- Development experience creating applications using Oracle Application Express (APEX), PL/SQL, JavaScript, and jQuery.
- Data Analysis experience (10+ years) with advanced Excel, Python, SQL, Tableau, Oracle, SQL Server, and MySQL.
- Experience leading and executing process improvement efforts utilizing BPM and BPMN software (Oracle BPM 11g, Bonita Studio, Enterprise Architect and Visual Paradigm) for functional design creation.
- Proven business analysis skills with an emphasis on requirements traceability, project effort/feasibility and validating those solutions exceed stakeholder expectations.
- Proven automation testing execution and strategies including writing test plans and strategies, test scripts, testing execution, validation, and creating/tracking/prioritizing defects.
- Implementation of major Loan Originations solutions/software including FICO Originations Manager, FIS and NetOxygen.
- Experience analyzing existing legacy systems and recommending either packaged solutions or in-house development solutions.
- Extensive application development knowledge with various SDLCs – including Agile (SCRUM), RUP, Iterative, Test-Driven Development (TDD) and Waterfall.

- Agile project experience (7+ years) as PRODUCT OWNER and SCRUM MASTER role.
- Project Management experience (7+ years) ranging from small to large complex project initiatives.
 - Project planning, estimation, communication, quality management, budget management, scheduling, cost control, resource allocation, collaboration software, decision-making and documentation.
- Great communication skills with ability to organize and facilitate group meetings, SCRUM sessions and JAD workshops leading to effective and clear goals.
- Experience creating a wide variety of models including UML (use cases), BPMN, Data Flow Diagrams (DFDs), User Stories, Data Modeling (ER Diagrams), Functional Decomposition, Interface Analysis, Metrics and KPIs and wire-framing (UI mockups).
- Extensive database and ETL experience with Oracle 10g and 11g, OBIEE, OBIA, MS SQL Server, MySQL, and MS Access to analyze, update and design databases, forms, reports, and business intelligence applications – as well as dashboards with KPIs.
- Over 10 years of experience using MS Office (through 2013), MS Project, MS PowerPoint, MS Excel, MS Visio, and MS SharePoint.
- Expert knowledge with many software packages including Rational Requirements Composer, Enterprise Architect, Methods Composer, Planview, Jama Contour, Clarity, HP Quality Center, JIRA, Confluence and TOAD as well as many others.
- Experience creating Microsoft SharePoint portals for document management, project management, discussion forums, workflows, defect and production issue tracking and collaboration solutions.
- Six years of experience utilizing various Agile tools for creating, editing, and managing user stories and defects.
 - *HP Quality Center, CA Rally, Atlassian JIRA, Visual Studio Team Services, MS Azure DevOps, Selenium Web Driver*

PROFESSIONAL EXPERIENCE

Nationwide Insurance *100% REMOTE
Sr. Scrum Master/Product Owner

Jan. 2022 – Nov. 2022

- Implemented a new product offering – allowing for two (2) Owners of a Life Insurance Policy – documented all screenshots/wireframes, requirements, backlog and product release.
- Conducted daily stand-ups, backlog grooming sessions of user stories, burn down charts, etc. related to agile methodology.
- Coordinated all user-acceptance testing and scheduled sessions with end users and customers.
- Communicated with stakeholders and gathered requirements/user stories as necessary using JIRA and Confluence products.
- Worked with vendors/customers to integrate 3rd party products utilizing API's and SOAP.
- Conducted retrospectives and documented all potential process improvement efforts.
- Led Scrum sessions as the Scrum Master and the Product Owner as needed.

CTS, Inc. (DELOITTE) *100% REMOTE
Sr. Business Systems Analyst

Jan. 2021 – Sep. 2021

- Working for a very large client, contributed to an international tax accounting software platform that was completely custom developed from the ground up. Focused on the Integrations and Architecture aspect of the program and:
 - Analyzed and created new procedures for updates to the data models.
 - Worked with 3rd party vendors to standardize new and existing API's.
 - Created process flows, data flows, architecture diagrams and others.
 - Created user stories and use-cases within MS Azure Dev Ops.

- Facilitated requirements sessions and documented requirements as user stories.
- Worked on process improvement efforts to existing processes and recommended best practices.
- Coordinated efforts with integrations to other modules and vendors and documented all results.

Anthem (Indianapolis, In.) *100% REMOTE
Sr. Systems Analyst

Mar. 2020 – Oct. 2020

- Concluded a short-term project for Anthem (100% remote) focusing on process improvement and operational support/configuration for the Internal Sales Compensation Team. Specifically supported configuration and feature updates to Salesforce and SAP/Callidus tools in multiple environments (Dev/Test/Prod) and managed/supported/tested and migrated manual system access requests to 'Service Now' - including UAT testing in their Service Now testing environment.
 - Utilized following tools and technologies for this engagement:
 - JIRA – Agile tool for user stories, defects, traceability and more
 - MS SQL Server – created SQL queries/reports/jobs/workflows for Internal Sales Compensation Teams
 - TOAD – IDE tool for database analysis, scripts, jobs, and queries
 - Salesforce – configured and updated changes as need to multiple environments (DEV, TEST, PROD)
 - SERVICE NOW – Updated and configured for Sales Associates to request access to SAP/Callidus which was the tool used mainly for complex sales incentive calculations and reporting
 - SAP/Callidus – Tool used mainly for complex sales incentive calculations and to make sure sales incentive teams were paid correctly for various plans sold.
 - MS Office 365/Visio – Basic Word, Excel and Visio and created flowcharts and diagrams as needed.

IU Health – Methodist Tower (Indianapolis, In.)
Sr. Systems Technical Analyst (ERP – Oracle Cloud Fusion Finance Module)

Feb. 2019 – Feb 2020

- Completed an Oracle Cloud Fusion ERP integration/migration project that is the largest Healthcare implementation of its kind for Oracle and the Healthcare industry, focusing on the financial module.
- Conducted integrations between vendors (internal/external) and documented Functional/Technical Documents for all the financial integrations.
 - Prioritized integrations for System Integration Testing (SIT) and Process Integration Testing (PIT) as well as worked with Dev and Enterprise Architecture for mapping, configurations, transfer method (SFTP, API, OIC, and Biztalk) and vendor readiness for SIT/PIT.
- Utilized both Microsoft Azure DevOps and JIRA for tracking the progress of the integrations, raising risks/issues, team communication and reporting.
- Lead Scrum Master for the QA and Development teams (offshore) conducting daily scrum stand-ups, sprint planning sessions, backlog grooming and prioritization, and sprint retrospectives – documenting all lessons learned for continuous improvement efforts.
- Created and tracked Change Requests (CRs) and estimated the effort, impact, and justification. Scheduled and organized requirements gathering/elicitation sessions with business leads and vendors to complete the integration documents for review/approval by business, development (including offshore) and enterprise architecture.
- Monitored task progress (main and sub-tasks) and confirmed task assignment, statuses, and estimated completion dates - escalated (created issues) as needed.
- Worked in a support role to the Business (FIN) assisting with configurations, data mapping, test file creation/validation and UAT.
- Utilized the following tools while at IU Health: SharePoint, MS Azure DevOps, VS Team Services, JIRA/Confluence, Visio, MS Office, Oracle Fusion Cloud ERP (Dev, Stage, Test, and Prod), and Oracle SQL Developer.

One America (Indianapolis, In.)
Sr. Systems Analyst Consultant

Nov. 2017 – Jan. 2019

- Completed a Platform Consolidation project – as two newly acquired businesses need to be consolidated into one business process and one software platform. Over 340 individual processes were identified as needing current state documented for three locations (Milwaukee, San Diego, and Indy home office) – this current state analysis has been going on since July and completed mid-November 2018.
- Created current state document and process flows for each location and each identified process.
- Acted as the Scrum Master for the ‘Modernization Project’ leading the team in sprint planning sessions, backlog grooming and prioritization of user stories.
- Identified roles, systems, business rules, process, inputs/outputs, triggers, and hand-offs.
- Utilized BPMN for process flows – and swim lanes.
- Review/approval process captured.
- Handed off process documents to ‘Operational Excellence’ for the consolidated future state to be captured.
- Finished a process improvement effort for the ‘Participant Service Centers (PSCs)’ improving Service Level Agreements (SLAs) from 20% to over 90% - with consistency in meeting the SLAs.
- Met with teams to document the user stories and proposed improvements within MS Team Services.
- Confirmed and tested that user acceptance was met – worked with business for UAT testing and tracked defects within MS Team Services.
- Proposed this effort utilize agile methodology and managing each improvement story in JIRA tool.
- Improved response time and communications between all teams.
- Facilitated and captured all the business requirements in ‘Business Requirements Document (BRD)’ for below projects:
 - *Automatic Contributions/Elections (ACA)* – assisted with the wire-framing and story for website updates
 - *Manage Your Retirement Plan (MyRP)* – led efforts to secure a 3rd party vendor to conduct retirement consulting sessions virtually – along with appointment scheduling and website integration/recording.
 - Defined the vendor scoring and facilitated vendor demo’s covering baselined requirements.
 - *Enterprise Content Management (ECM)* – Facilitated and documented requirements for purchase of 3rd party imaging/document management software to replace legacy systems
 - Worked with another OA team to integrate chosen system (Alfresco) with purchased workflow system (PEGA)
 - Researched 3rd parties to integrate the two systems instead of programming the API’s
 - Captured requirements/stories to integrate systems
 - Created and conducted UAT testing in DEV environments
 - Captured ‘Governance Plan’
 - Assisted with setting up cloud environments (DEV/QA/PROD) for Alfresco

CNO Financial - Bankers Life (Carmel, In.)
Business Systems Analyst Consultant

Nov. 2016 – Apr. 2017

- Worked on a regulatory project for CNO so that they could meet the new Department of Labor (DOL) Conflict of Interest and Fiduciary rules related to selling financial instruments (e.g., Universal Life and Fixed Annuities).
- Conducted requirements sessions with stakeholders and elicited and documented all stakeholder and functional/non-functional requirements for the project.
- Created UAT Test Plans for the project and collaborated with QA and UAT testers to author the associated test cases.
- Created business process flows and context diagrams while collaborating with solution architects for the project solution.
- Created and managed the project backlog while authoring artifacts for the day-2 solution requirements.
- Managed requirements traceability and created all requirements within Quality Center.
- Managed defects within Quality Center and collaborated with the development team on the resolution of those defects while confirming the severity level.

- Utilized PowerBI and advanced Excel (source) to visualize sales by area/agent identifying fiduciary responsibility for the DOL project.

FICO (Telecommute and 50% Travel)
Principal Business Analyst Consultant

Oct. 2015 – Oct. 2016

- Created and elicited all requirements for a very large-scale loan originations and credit risk project (to process average of over 500,000 applications per month). Consisted of over 700 requirements that I created, elicited, groomed, and managed within an agile environment utilizing an agile tool (Rally).
- Captured requirements for enhancements to Salesforce – as well as wire-frames/prototypes of enhancements.
- Conducted daily SCRUM grooming sessions to add relevant details and to plan and prioritize those requirements for releases/iterations. Led the backlog grooming efforts to determine dependencies between 'Features' and to properly order the features into the correct sprints.
- Managed traceability of requirements/user stories between the original requirements, user stories in Rally as well as the test cases and associated defects.
- Created and managed defects from each iteration/release and prioritized them for fixes. This included triage to confirm the defects were valid and not new requirements or added scope.
- Conducted data analysis and reporting on defects by severity, resource and priority utilizing extracted data and Excel pivot tables to report to Management and the Client daily.
- Responsible for keeping defects aligned between our system (Rally) and the customer's defect system (Quality Center) using data analysis and extracts.
- Assisted with creating the training environment, training documentation and training scenarios for the Client.
- Worked directly with the Developers, QA and Client to make sure there was complete understanding of all requirements, user stories and defects.
- Created technical design documents related to Adverse Action Letters and worked with 3rd party letter mailing vendor to complete the solution.
- Conducted automation testing, created test plans/cases, UAT and created/tracked defects.

BMO Harris Bank (Naperville, IL.)
Senior Business Analyst Consultant

Nov. 2014 – Sep. 2015

- Completed all requirements for the replacement of a major commercial bank Loan Originations System (LOS) project. Focused my efforts on third party interfaces/vendor applications and data extracts to interface with the new LOS system.
- Worked with development team and architects to improve the UX for the new LOS system. This involved creating new wire-frames/prototypes for the LOS screens receiving data from 3rd party systems.
- Worked with vendors to resolve contract negotiations and identified potential risks – coming up with solutions to mitigate the risks through collaboration with upper management.
- Maintained all third-party vendor contacts, test/prod credentials, user groups and resolved issues timely during time sensitive testing by collaborating with the proper vendor contacts.
- Was Scrum Master for daily stand-ups, sprint planning, backlog grooming and retrospectives with all internal teams as well as 3rd party vendor teams (business sponsors as well as technical and QA teams).
- Conducted data mappings and data models for third party interfaces and identified all data exchanges between systems.
- Created Requirements Traceability Matrixes (RTMs) from approved requirements for third party interfaces to the new LOS.
- Facilitated architecture and design JAD sessions on the bank side and assisted in providing schemas and XML metadata from the vendor interfaces to the new LOS.
- Recommended best practices for requirements elicitation and approval methods to management from past projects.

- Escalated risks and potential risks during the project to proper channels to meet stringent deadlines and keep the project milestones/deliverables on track.
- Captured and managed change requests throughout the lifecycle – as well as provided effort estimations to internal and external development teams.
- Created dashboards and metrics using PowerBI to visualize change requests and effort estimations from Excel source files (flat data files).
- Shared past best practices for consultant on-boarding including organizing a SharePoint BA portal for all relevant artifacts and documents/models.
- Reviewed and approved vendor provided Detailed Requirements Specs (DRSs) and Provider Implementation Guides (PIGs).
- Participated in peer reviews of Detailed Requirements Specifications (DRSs) authored by other Business Analysts for multiple work-streams such as internal interfaces and UX Design.
- Facilitated the review and approval of Statements of Work (SOWs) from third party vendors.
- Assisted with Project Management activities during transitions between Project Managers.
- Completed Design Specification for the 1099Pro system to submit data to the IRS for consumers that did not receive their 1098's for past years. This included creating ad-hoc reports and report specifications.
- Finished a project (Straight through Processing) eliminating touch points (automation) and adding bar coding to incoming and outgoing documentation saving thousands of work hours per year.

Federal Home Loan Bank of Chicago (FHLBC) (Chicago, IL.)
Senior Business/Data Analyst Consultant

Jun. 2013 – Nov. 2014

- Completed a regulatory and compliance project to assist our member banks and their members proactively monitor their Risk Based Capital (RBC) Basel III Requirements. Conducted data analysis, research and reporting from existing FHLBC data marts to provide members with the inputs needed to generate Basel III calculations and models. The models' purpose was to show Risk Weight Multipliers and Percentages under different levels of Credit Enhancement (CE) Obligations and First Loss Accounts.
- Completed requirements for an Additional Investor project that involved re-engineering the underlying database structure to handle new investors. As part of this project, conducted extensive database analysis tasks as well as creating new data-models and rules.
 - Created wire-frames for the future state to capture new data fields within the banks Loan Originations (LOS) system.
 - Documented training materials to provide to potential new members.
 - Performed UAT within the test environment and documented/tracked defects through to resolution.
- Analyzed UX of current LOS system design and assisting in creating new wire-frames for front-end screens impacted by the re-engineered database structure.
- Standardized investment records and business process workflows for multiple investors such as Fannie Mae, Freddie Mac and associated bank members.
- Created business processes, data diagrams and mappings, as well as proof of concepts and wire-frames for new line of business involving mortgage loan pooling for various investors and various product types to sell to new and existing investors.
- Utilized Waterfall and Scrum (Agile) methodologies in eliciting and documenting requirements.
 - Acted as the Scrum Master for a pilot Agile project, and as a Product Owner on another reporting project.
 - Utilized burn-down charts and backlogs to assist in planning iterations as well as time boxing sprints based on analysis and constant review.
- Conducted User Acceptance testing by creating test data for Bank Members and analyzed resulting downstream results, as well as communicating results to business and development.
- Created test plans, test cases and test scenarios for multiple projects and executed test scripts (automated using Selenium); tracked/traced/prioritized bugs/defects.
- Participated in re-engineering new requirements artifacts based on new bank methodologies (i.e., Functional Specification, Requirements Traceability Matrix, etc.).
- Analyzed and documented downstream impacts to data marts, financial transactions, batch processes and reporting.

- Created a dashboard containing metrics and visualizations showing financial transaction summaries by bank/institution and by day/week/month/year from database and Excel sources.
- Created various file formats (i.e., CSV and XML) and mockups for new projects and initiatives.
- Identified End User Computing (EUC) and manual processes through facilitation and elicited/document requirements for automation solutions.
- Recommended best practice methods for requirements analysis and elicitation based on previous successful implementations eliminating waste and scope-creep. These included lessons learned at the completion of each project.

VW Credit, Inc. (Libertyville, IL.)
Senior Business Analyst Consultant

Oct. 2012 – Jun. 2013

- Completed numerous projects on time and under budget with minimal change requests (CRs) and successful implementations.
- Implementation of an automated call monitoring solution that effectively and efficiently monitors and captures calls, as well as screens processing activities that will provide meaningful and actionable information and process improvement opportunities to the management team and staff.
- Implemented a solution to identify the 'ideal' auto auction network. The model would provide cost analysis to include a location's optimal capacity (volume), effects of an increase or decrease in the vehicle inventory at these auction sites, and forecast to which auction site assignment would garner highest returns, based on measurement of market capacity and bid history.
- Conducted vendor analysis to select a new vendor for vehicle title administration. The vendor stores, maintains, and releases these titles to payers, based on action requests sent to the vendor through interfacing with the LOS.
- Performed Gap Analysis activities for the implementation of a large company wide CRM system. This included requirements for many interfaces to existing systems, as well as data mappings and file layouts.
- For all projects conducted stakeholder analysis, facilitated and elicited requirements sessions, documented all requirements artifacts and conducted requirements document reviews and approvals.
- For projects where a new vendor needed selected, conducted vendor analysis activities, coordinated vendor demos, organized 'apples to apples' cost comparisons based on similar functionality and made final recommendations to management and stakeholders.
- Utilized various modeling techniques such as business process flows, technical systems diagrams, use cases, user stories and data flow diagrams.
- Drafted data design documents, file layouts and mappings, screen wire-frames, conducted cost/benefit analysis and authored test cases.

Navistar, Inc. (Lisle, IL.)
Senior Business Systems Analyst Consultant

Feb. 2012 – Sep. 2012

- Facilitated SCRUM and requirements/elicitation sessions for multiple projects and completed all requirements artifacts, which were approved by the governance committee.
- Completed high/low level business process workflows utilizing Oracle BPM for the 'as-is' and 'to-be' states for multiple projects.
- Authored scope/vision documents for multiple projects and outlined benefits, ROI, risks, constraints, business cases and justifications.
- Aligned requirements to overall company IT strategy, which included increased adoption of SOA and web services.
- Evaluated multiple solutions and conducted data analysis to select a vendor software solution for the SQMPS (Supplier Quality and Management Performance System). The project goal was to utilize industry standards and best practices for: Supplier Request for Engineering Approval (SREA), Advanced Product Quality Planning (APQP), Product and Process Approval (PPAP) and Certified Automotive Parts Association (CAPA) to ensure only approved products make it to assembly.
- Recommended in-house solution utilizing existing software and services for the Defense Purchasing Compliance project. This included complying with security requirements for ITAR documents, images, and engineering specifications.

- Conducted advanced data analysis to determine the volume levels of existing data, documents, and specs.
- Conducted data analysis for other in-progress projects to identify synergies, dependencies, impacts and testing requirements.
 - This led to combined project efforts, reduced effort duplication, and overall reduced the combined project costs.
- Communicated project requirements and technical details to enterprise architecture and development teams.
- Created technical architecture documentation with multiple solution analysis, leading to and proposing a recommended solution.
- Created SharePoint 2010 project portals to maintain all project documentation and artifacts.
 - Additionally, created workflows for artifact reviews and approvals.
- Engaged multiple subject matter experts (SMEs) to define all system interfaces and data interfaces required for multiple projects. Utilized existing data feeds whenever necessary as discovered during analysis efforts.

Deloitte (Chicago, IL.)

Senior Business/Data Analyst Consultant

Nov. 2010 – Dec. 2011

- Completed multiple projects for their consulting division involving data migration (ETL), business intelligence, report specifications, CRM, and risk assessment.
- Utilized multiple methodologies including Agile (SCRUM), Iterative (RUP) and Waterfall for project activities and artifacts including scope/vision documents, requirement specifications, technical specifications, use case catalogs and test cases.
- Scheduled, managed, elicited, and communicated requirements through JAD and requirements sessions.
- Created BA work breakdown structures (WBS) for each project and validated against overall master project plans (in MS Project).
- Conducted Current State and Future State activities (Fit Gap) involving migration of existing applications to MS SharePoint and MS SQL Server for collaboration and reporting.
- Business intelligence (BI) and Data Analysis activities involving report specifications, data modeling, data dictionary and user interface prototyping.
 - Involved with the development of a new report generation tool (IndustryPrint Process Modeler) for consultants to effectively model, report and create consulting client artifacts. Included JAD sessions, wire-framing, report specifications and solution prototyping.
 - IndustryPrint 5 recently won an innovation award at Process World in August of 2011.
 - Conducted UX sessions (white boarding) to ensure the new reports and tools had an improved user experience.
- Planned, coordinated, facilitated, communicated, traced, and verified all business needs and requirements for all projects.
- Communicated all business needs and requirements to the architecture, development and QA teams as well as managing the traceability and feasibility of requirements.
- Provided recommendations for process improvement initiatives and aligned project requirements with strategic initiatives.
- Utilized various tools such as Tableau, Visio, Rational Requirements Composer, Requirements Pro, HP Quality Center, ARIS Business Architect, SharePoint 2010, and Enterprise Architect (BPMN modeling).

EDUCATION & AFFILIATIONS

Indiana University, Purdue University at Indianapolis (IUPUI) – A.S. Degree, Computer Technology and Business Systems

International Institute of Business Analysis (IIBA) – Member since 2009

Scrum Master Training – 2 Day Course from the Centare Group

Business Process Modeling Training (BPMN 2.0) – 1 Week Training – Navistar
