

Abhishek Goel

Data Scientist

abhishekgoel13197@gmail.com

9650893638

Delhi, India

Dynamic professional with over 5 years of extensive experience in Python programming and 4 years of hands-on expertise in machine learning, object detection, data scraping, image processing, natural language processing (NLP), and model training. Passionate about delivering innovative solutions and eager to contribute to a forward-thinking organization by applying strong analytical and problem-solving skills to drive impactful results in data-driven projects.

WORK EXPERIENCE

Data Scientist - Level 2

Market Xcel Data Matrix

07/2024 - Present

Delhi

- Used YOLO and OpenCV to extract star labels from product images and store all relevant information in Excel.
- Automated mobile app testing using Appium.
- Detected in and out times of personnel in mobile stores using YOLO.
- Trained YOLO model for detection of mobile boxes in videos.
- Tracked objects using spatial proximity.
- Converted complex JSON user app usage data to Excel and refined the file as required, identifying products and their types using GPT.

Lead Data Science

A A GARG And Company

12/2022 - 07/2024

Delhi

- Worked on Python projects.
- Developed scrapers for various projects to collect data from different websites.
- Created multiple bots for various websites capable of filling thousands of forms using AI and performing different operations.
- Developed a customized ChatBot using OpenAI API.
- Worked on additional projects such as PDF merging, invoice creation, and refining Excel files.
- Also worked on React.js.

Data Scientist

Aivamastu

09/2020 - 07/2022

Remote

- Worked on Jupyter Notebook for creating functions and scraping data from websites.
- Performed data cleansing and analyzed insights from datasets using NLP and utilized MySQL for data management.

Technical Analyst

Agile Microsys Pvt Ltd

SKILLS

Python

Machine Learning

Open AI

ChatGPT

SQL

Computer Vision

Deep Learning

Data Scrapping

Numpy

Pandas

TensorFlow

Regression

KERAS

Appium

Generative AI

RAG

YOLO

Object Detection and Tracking

Image Processing

Data Analysis

GOOGLE CLOUD

AWS

Oracle Apex

FastAPI

Microsoft Azure

COURSES

PG Certification Program in Artificial Intelligence and Machine Learning, IIIT HYDERABAD

04/2024 - 02/2025

Data Science, Udemy

01/2020 - 03/2020

LINKS

LinkedIn

HOBBIES

Trekking

12/2019 - 07/2020

Gurugram

- The company deals in thermal cameras and various related products.
- Monitored the performance of thermal cameras virtually posted on multiple sites.
- Performed data cleansing and standardization to uncover trends and insights using Excel.
- Used FLIR software to facilitate dynamic loading of data.

Python Developer Intern

Vanisb Technology

08/2019 - 11/2019

Delhi

EDUCATION

Btech in IT

Institute of Management Studies

08/2015 - 05/2019

Ghaziabad(UP)

12th

Bhai Parmanand Vidya Mandir

04/2014 - 05/2015

Delhi

PROJECTS

Movie Recommendation Model

04/2019 - 04/2019

Built a personalized movie recommendation model using K-Means clustering to group users based on viewing history and suggest relevant movies. Utilized Python, Pandas, and Scikit-learn for data preprocessing, clustering, and recommendation logic. Completed over 3 weeks, including model evaluation and tuning.

Job Website Scraper

Able to scrape all contents from job websites like job description, date, experience, skills, etc., using Selenium. Cleaned all the data for further processing.

Automated Registration

Developed a script to automate multiple registrations on certain websites using Selenium.

Spam Mail Detector

05/2020 - 05/2020

Developed a spam email classifier using the Naive Bayes algorithm. Processed and vectorized email text data using NLP techniques to accurately distinguish between spam and non-spam messages.

Emotion Detector

11/2021 - 12/2021

Built a real-time emotion recognition system that detects human emotions (e.g., happy, sad, angry, surprised) from

video input using a webcam or video file. Integrated OpenCV for face detection and frame processing, and employed a Convolutional Neural Network (CNN) trained on facial expression datasets (e.g., FER-2013) to classify emotions based on facial features. Optimized the model for real-time inference with pre-processing techniques and efficient frame handling. This project demonstrates the application of computer vision and deep learning in human-computer interaction and behavioral analytics.

ChatBot

06/2022 - 07/2022

Designed and implemented a conversational chatbot using OpenAI's GPT-based API. Fine-tuned the model with domain-specific data to enhance response accuracy and relevance. Integrated natural language understanding to handle user queries with contextual awareness, enabling dynamic and human-like conversations. Applied the solution to tasks such as customer support, FAQs, or virtual assistance.
