Career Objective:

Seeking a career opportunity to utilize my skills and provide significant contribution to the growth of my employer effectively. Willingness to work hard in a challenging environment with a purpose of growth, knowledge and creativity, in order to achieve organizational goals.

Professional Summary:

- 3.6 years of experience in **Software Testing**.
- Hands on experience in Automation Testing using **Java, Selenium web driver**.
- Working experience with TestNG using Page Object model design Pattern.
- Experience into **API Testing** using **POSTMAN, Rest Assured, Jira**.
- Good knowledge in **SQL**.
- Well acquainted with the Software Development Life Cycle (SDLC) & Software Testing Life Cycle (STLC) of applications.
- Having good knowledge on **Jenkins** and **Maven**.
- Flexible and versatile to adopt to new environment and work on any project.
- Experience in Agile methodology.

Academic Details:

- B.E (ECE) from Basavakalyan Engineering Colleg(VTU), Basavakalyan, Karnataka in 2021.

Professional Experience:

- Worked with **Trenika Technologies Pvt Ltd.** as a QA Engineer from 20 December 2021 to 21 August 2023.(1yrs 8 mos)
- Working with **AmpusCyber** as a QA Automation Engineer from 28 August 2023 to 20 December 2024. (1yrs 4 mos)
- Working with **BESTQ** as a Test Engineer from 06 Jan 2025 to till date. (6 mos)

Technical Summary:

Software Testing Skills	: Automation Testing,Manual Testing
Testing Tools	: Selenium, TestNG. Cucumber, Rest Assured. Defect
Management tool	: Jira
Languages	: Java
Database	: SQL

Project Summary:

Project #1:

Project Name	:	Shop Easy
Testing Type	:	Automation and manual
Role	:	QA Engineer
Details of Skills used	:	Selenium, Java, TestNG, Postman, REST APIs, MySQL, Jira

Description:

ShopEasy is a web-based e-commerce platform offering multi-category product purchases, order tracking, cart management, and online payments. The application includes modules for customer interaction, product management, payment integration, and admin control.

Roles & Responsibilities:

- Understand project requirements and specifications.
- Collaborate with developers and stakeholders to grasp application functionality.
- Develop a comprehensive test plan outlining the scope, approach, resources, and schedule for automation.
- Identify test scenarios suitable for automation.
- Evaluate and select appropriate automation testing tools based on project requirements.
- Execute automated test scripts to validate software functionality.
- Debug and troubleshoot issues with scripts or test environment.
- Automating test cases using selenium and TestNG to test UI.
- Integrate automated tests into the continuous integration/continuous deployment (CI/CD) pipeline.
- Ensure that tests run seamlessly with each code commit.
- Manage and create test data required for automated testing.

Project #2:

Project	:	HealthTrack
Testing Type	:	Automation and manual
Role	:	QA Automation Engineer
Details of Skills used	:	Selenium WebDriver, TestNG, Java, Postman, SQL

Description:

Health-track is a hospital management application that supports patient registration, appointment scheduling, electronic prescriptions, lab reports, and billing. The system helps doctors, patients, and staff interact seamlessly and securely.

Roles & Responsibilities:

- Analyzed SRS documents and created test scenarios for each healthcare module.
- Performed functional, smoke, sanity, and regression testing manually.
- Automated appointment scheduling and prescription validation flows using Selenium.
- Conducted API testing using Postman for patient and doctor data endpoints.
- Tested role-based access for Admin, Doctor, and Patient logins.
- Logged defects and performed retesting and regression on fixed bugs.
- Document defects and work closely with developers to resolve issues.
- Implement and maintain regression test suites to ensure the stability of existing features after changes.
- Collaborate with manual testing teams to ensure comprehensive test coverage.
- Work closely with developers to understand changes and updates.

Project #3

Project	:	MPMS
Testing	:	Automation and manual
Type Role	:	Test Engineer
Details of Skill used	:	Core Java, Selenium, TestNG, REST Assured, Postman

Description:

MPMS is a procurement platform that automates enterprise-level purchasing processes. The project includes complete workflows such as Intake Requests, Purchase Requisition (PR), Purchase Orders (PO), Invoicing, Auctions, and Counter-Offer negotiations.

Roles & Responsibilities:

- Reviewed requirement documents and created detailed test cases for the procurement modules.
- Performed manual testing on Intake, PR creation, PO workflows, and Invoicing.
- Validated REST APIs for status updates, counter-offers, and invoice submission using REST Assured and Postman.
- Participated in auctions and vendor bid testing including edge scenarios.
- Logged, tracked, and retested bugs using Jira.
- Attended daily stand-ups and collaborated with cross-functional Agile teams.
- Supported test data creation and environment setup for procurement workflows.
- Ensured automation was integrated with CI/CD pipelines for daily validation.
- Prepared test summary reports and defect metrics for sprint releases.
