Top Skills

Azure Databricks, SQL, Python
Azure Data Factory,
SnowFlakes,
PySpark

Tarun Raj Sondi

Azure Data Engineer
India

Summary

1. Total 4 + years of IT experience as an Azure Data Engineer, focused on cloud-based data integration, migration, and scalable data architecture using Azure Databricks, Python, PySpark, SQL, Azure Data Lake Storage (ADLS), and Azure Data Factory (ADF).
2. Proven expertise in designing and optimizing data workflows, integrating structured and semi-structured data from various sources including on-premise databases, SFTP, AWS S3, and REST APIs into Delta Lake, utilizing Delta Lake features and Spark SQL for efficient data transformation and analytics.
3. Strong background in ETL/ELT design, data warehousing best practices, and implementing data lakehouse architectures using the Medallion framework (Bronze, Silver, Gold layers) for organized, governed, and performant data management.
4. Hands-on experience with Azure Databricks, Azure SQL, and ADF, developing and automating end-to-end data pipelines to support large-scale ingestion, transformation, and loading, ensuring high availability and reliability.
5. Proficient in data quality enforcement using techniques such as expectation-based validation, null checks, schema enforcement, and deduplication, ensuring clean and trusted data is delivered across layers.
6. Implemented various performance optimizations including Z-Ordering, data partitioning, and OPTIMIZE + VACUUM on Delta tables. Efficient use of broadcast joins, caching, and repartitioning strategies in PySpark. Query tuning and resource scaling to reduce job runtimes and cost on Databricks.
7. Experience in proactive monitoring and incident resolution of production pipelines using ADF activity runs, Databricks job logs, and alerting frameworks, minimizing downtime and SLA breaches.
8. Demonstrated ability in requirement gathering, source-target mapping, and user issue resolution, ensuring end-to-end delivery of reliable and scalable data solutions across domains such as healthcare, finance, and retail.

9. Strong collaboration skills, working closely with Data Architects (DCA), Tech Consultants (TCA), and Subject Matter Experts (SMEs) to design, troubleshoot, and optimize pipelines in a cost-effective and business-aligned manner.

10. Adept at data analysis, building efficient transformation logic, and managing large-scale cloud infrastructure, with a continuous focus on performance, maintainability, and scalability.

Experience

Unisys India

Azure Data Engineer

September 2021 - Present

Roles & Responsibilities:

1. Developed and maintained large-scale data processing workflows using Azure Databricks and PySpark, enabling ingestion, cleansing, and transformation of structured and semi-structured data.
2. Designed and implemented data pipelines to process data from multiple sources including on-prem databases, flat files (CSV, Excel), REST APIs, and cloud storage (ADLS, AWS S3).
3. Wrote efficient and modular PySpark code to handle business logic transformations such as filtering, joins, aggregations, window functions, and pivoting.
4. Applied performance tuning techniques including proper partitioning, caching, and broadcast joins to reduce execution time and improve resource efficiency.
5. Performed data profiling and validation using PySpark and SQL to ensure data quality, completeness, and correctness before pushing to downstream layers.
6. Created temporary views and SQL queries within Databricks for exploratory data analysis, transformation logic validation, and to support ad hoc reporting needs.
7. Monitored and debugged data jobs using Databricks logs and Spark UI, identifying and resolving issues such as skewed joins, memory errors, and slow transformations.
8. Collaborated with data analysts and domain experts to understand requirements and translate them into scalable and maintainable data workflows.

9. Documented processing logic, transformation steps, and data flows to ensure clarity for team members and smooth handovers.
10. Supported data quality audits by building validation logic to check for nulls, duplicates, incorrect formats, and other inconsistencies in raw and processed datasets.

Education

Lovely Professional University

Bachelor of Technology - BTech, Computer Science (2016 - 2020)
