=====

PROFESSIONAL SUMMARY:

- 5+ years of experience as a Developer with a focus in big data space. Extensive experience in coding with analytical programming using **Python, Scala, Scala Spark, Kafka Streaming, PySpark, AWS, SQL, and related Hadoop ecosystem.**
- Familiarity with **DevOps** tools like **GIT, Jenkins** and **Terraform.**
- Fully involved in system development and support and being responsible for the design and development of high-performance software as well as **CI/CD pipelines.**
- Heavy experience **with AWS both for data processing and implementation of Cloud Infrastructure.**
- Develop excellent quality software using agile techniques such as Test-Driven Development
- Actively contribute in development, sprint planning, **support (L2)** & release management
- Work with support to investigate problems, perform root-cause analysis and deliver bug-fixes
- Experience with streaming ingestion and AWS lambda for ingestion as well.
- Tested own code and peer-test other developers' code. Great debugging skills.
- Implemented advanced procedures like text analytics and processing using the in-memory computing capabilities like **Apache Spark written in Scala and Python.**
- Good Understanding of **Hadoop** architecture and Hands-on experience with **Hadoop** components
- Experienced in **Cloudera ecosystem (HDFS, YARN, Hive, SQOOP, FLUME, HBASE, Oozie, and Kafka),** Data pipeline, and data analysis and processing with **hive QL, SPARK, SPARK SQL.**
- Hands on experience on architecting the ETL transformation layers and writing **spark** jobs to do the processing.
- Experience with Databricks distribution as well.
- Good experience of software development in Python (libraries used: Flask, NumPy, SciPy, urllib2, MySQL dB for database connectivity) and IDEs – VS code & PyCharm.
- Having good experience in AWS Services (EC2, Lambda, EMR, S3, SNS etc.).
- Experience in pulling data from Amazon S3 cloud to HDFS and vice-versa.
- Hands on experience in VPN Putty and WinSCP.
- Experience in scheduling and monitoring jobs using Oozie and Zookeeper.
- Expertise in Waterfall and Agile - SCRUM methodologies.
- Part of teams in successfully loading files to **Hive** and HDFS from **MongoDB, Cassandra,** and HBase.
- Experience working with different databases, such as Oracle, **SQL** Server, **MySQL** and writing stored procedures, functions, joins, and triggers for different Data Models.
- Excellent communication skills, interpersonal skills, detail oriented, problem solving skills, a very good team player along with a can-do attitude and ability to **effectively communicate** with all levels of the organization such as technical, management and customers.

TECHNICAL SKILLS:

Technologies	HDFS, Flask, Kafka, API's, Microsoft Power BI, Hadoop, Hbase, Spark and Flink (Pocs) And Yarn, Zookeeper.
Languages	Python, Scala
Databases	MySQL, SQL/PL-SQL, MS-SQL Server 20012/16, Oracle 10g/11g/12c
Scripting	Shell, Python.
NoSQL Databases	Cassandra, mongo DB, ELASTIC SEARCH, Hbase
OS	Linux, Rhel 5/6/7.
SLC	SDLC, Waterfall and Agile models
Cloud	Amazon EC2, S3, EMR, Dynamo DB, Azure Hd Insights.
Utilities/Tools	Eclipse, IntelliJ, Tomcat, JUnit, SQL, SVN, Log4j, Pandas, Maven, SBT
AWS Services	EC2, S3, EMR, Lambda, Glue, Athena, Redshift , Step Functions

PROFESSIONAL EXPERIENCE:

Evicore Health Franklin, TN
Spark Kafka Developer

Feb 2021 - Present

Responsibilities:

- Design a framework to consume real time data from multiple sources and consolidate the input
- Read from multiple Kafka streams and process and transform the input
- Handle large Json files and both read write to Kafka
- Implement strategies to decrease processing time and implement Cosmos DB within framework
- Designing applications on Databricks cluster and configuring nodes and workers
- Closely monitoring Azure metrics usage and trying to reduce cost and then implementing said strategies to reduce costs and increase performance
- Modified and redesigned architecture to save costs and tackle latency while increasing performance
- Loaded and retrieved data from cosmos DB and reduced read and write time by 50% while utilizing less RU's
- Implemented multi-threading and Scala futures where relevant.
- Peer reviewed developer's code and made changes to process the flow better.
- Used terraform as an infrastructure provisioning tool.
- Changed job structure and code flow in the Prod env to make deployments easier and maximize resource usage.
- Requested for a cloud space to be created for all spark developers across the organization to create a healthy learning environment between all developers.

Environment: Hadoop, Spark3, Spark Scala, Spark SQL, Databricks, Kafka tool , Kafka , HDFS, Oracle, SQL Server, Cosmos DB Zookeeper .

Cisco, San Jose, California
Spark Developer II

Dec 2019 – Jan 2021

Responsibilities:

- Consolidate inputs from developers and collectively provide inputs on activities/ tasks.
- Responsible for data migration from Oracle to Postgres.
- Replicating ETL functionality to the new web application or different modules with the Spark processing framework.
- Fetch and Process and write data to Postgres using Spark framework.
- Implemented **Spark** code in order to load various JSON and CSV files into **HIVE** tables.
- Designed and implemented **Spark** jobs to support distributed processing using **Spark and Hive**.
- Extensive knowledge of Scala/Python development
- Research relevant technology trends and recognize trends that are relevant to the retail industry
- Implement solutions that can solve common problems
- Document designs and specifications of various **Spark** applications and involved in end-to-end data pipeline using **Scala** for generating required Import data from sources like HDFS/HBase into **Spark** RDD.
- Implemented **Hive** UDF's to implement business logic and Responsible for performing extensive data validation using **Hive**.
- Worked on **NOSQL Databases** such as Mongo dB, also used **SPARK** for real time streaming of data into the cluster.
- Implemented Datasets as Pocs to tune performance.

Environment: Hadoop, Spark, HDFS, Hive, Postgres SQL, Mongo dB Cloudera Manager, Sqoop, Zookeeper, Yarn, PL/SQL, MySQL, Hbase.

The City of Wichita/Wichita Police Wichita, Kansas
Software Developer /Quality Control Engineer

Mar 2018 – Aug 2019

Responsibilities:

- Responsible for designing and implementing the architecture of the whole process and debugging and optimizing performance using various strategies to reduce costs.
- Conducted a thorough market research of all materials available and the best one suited for our Needs.
- Part of the design team to define and implement hardware requirements.
- Met up with clients to confirm requirements and made sure that the team stays on track.
- Designed the hardware to be able to meet all of the requirements specified within the project.
- Used Python's open CV library to implement our required functionality.
- Tested integration of hardware and software components and made a recommendation to the city responsible for technical and non-technical documentation.
- Performed a thorough analysis for the materials used for the hardware to withstand all unforeseen events.
- Maintained the integrity of our target and was also the quality/project engineer in this particular project.
- Built a central repository for version control using git.
- Also was a Quality control engineer and implemented waterfall methodology.

Environment: Linux, Raspberry OS, Python, MySQL, Open CV, IC

S & K Auto Sales, Wichita, Kansas
Software Developer

Jan 2017 – Mar 2018

Responsibilities:

- Maintained website and application, including account administration, debugging, feature enhancements and testing.
- Used Power Bi to draw insights into data and to load data from RDBMS and draw relationships between sale trends and followed agile methodology and worked in Agile development environment.
- Performed data cleansing and optimized performance.
- Perform quality assurance and testing of SQL server environment.
- Develop new processes to facilitate import and normalization, including data file for counterparties.
- Work with business stakeholders, application developers, and production teams and across functional units to identify business needs and discuss solution options.

Environment: MySQL, Flask, Python, Microsoft Power BI, Oracle Apex, JavaScript.

The Golf warehouse, Wichita, Kansas
Junior Information Technology Associate

Feb 2016 – Dec 2016

Responsibilities:

- Developed Oracle Apex applications from scratch
- Performed data cleansing and validation
- Verified products against the existing database and fixed any redundancies
- Streamlined the shipping process by designing an application to reduce manual work on the shipping line.
- Assisted in designing, building, and maintaining databases to analyze the life cycle.
- Active role in assigning and deleting roles in the AD and also responsible for setting up new devices and laptop's for employees.

EDUCATION:

Bachelor in Electrical Engineering (Minors -CS), Wichita State University, Wichita, Kansas, 2019
